Even If You Like Meat...

You Can Help End This Cruelty

By just cutting your meat intake in half, you can spare hundreds of animals from a lifetime of suffering.
Thank you for accepting this booklet. As you read on, please bear in mind that opposing the cruelties of factory farming is not an all-or-nothing proposition: By simply eating less meat, you can help prevent farmed animals from suffering.

“When we picture a farm, we picture scenes from Old MacDonald and Charlotte’s Web, not warehouses with 10,000 chickens.... When we look, it’s shocking. Our rural idylls have been transformed into stinking factories.”

_The Los Angeles Times_
“The High Price of Cheap Food,” 1/21/04

Above: The average breeding sow spends most of her life in a two-foot-wide stall, without enough room to turn around; others (below) live in crowded pens.

Today’s egg-laying hens are warehoused inside battery cages.

Most U.S. livestock production has shifted from small family farms to factory farms—huge warehouses where the animals are confined in crowded cages or pens or in restrictive stalls. Due to consumer demand for inexpensive meat, eggs, and dairy, these animals are treated as mere objects rather than individuals who can suffer.

Hidden from public view, the cruelty that occurs on factory farms is easy to ignore. But more and more people are becoming aware of how farmed animals are treated and deciding that it’s too cruel to support.
Virtually all U.S. birds raised for food are factory farmed. Inside densely populated sheds, vast amounts of waste accumulate. The resulting ammonia levels commonly cause painful burns to the birds’ skin, eyes, and respiratory tracts.

To cut losses from birds pecking each other, farmers remove a third to a half of the beak from egg-laying hens, breeding chickens, and most turkeys and ducks. The birds suffer severe pain for weeks.

“In my opinion, if most urban meat eaters were to visit an industrial broiler house, to see how the birds are raised, and could see the birds being ‘harvested’ and then being ‘processed’ in a poultry processing plant, they would not be impressed and some, perhaps many of them would swear off eating chicken and perhaps all meat.

“For modern animal agriculture, the less the consumer knows about what’s happening before the meat hits the plate, the better. If true, is this an ethical situation? Should we be reluctant to let people know what really goes on, because we’re not really proud of it and concerned that it might turn them to vegetarianism?”

Peter Cheeke, PhD
Oregon State University Professor of Animal Agriculture
Contemporary Issues in Animal Agriculture, 2004 textbook

“Free-Range” Poultry meat may carry this label if the birds were given an opportunity to access the outdoors. No other requirements, such as environmental quality or space per bird, are specified by the USDA. Free-range farms may be an improvement over conventional farms, but they are by no means free of suffering.
“[T]he American laying hen...passes her brief span piled together with a half-dozen other hens in a wire cage whose floor a single page of this [New York Times] magazine could carpet. Every natural instinct of this animal is thwarted, leading to a range of behavioral ‘vices’ that can include cannibalizing her cagemates and rubbing her body against the wire mesh until it is featherless and bleeding.... [T]he [5 percent]\(^9\) or so of hens that can’t bear it and simply die is built into the cost of production.... [continued on page 5]

Egg-Laying Hens

Packed in battery cages (typically less than half a square foot of floor space per bird),\(^7\) hens can become immobilized and die of asphyxiation or dehydration. Decomposing corpses are found in cages with live birds.

Professor Bernard E. Rollin explains that “though each hen is less productive when crowded, the operation as a whole makes more money with a high stocking density: chickens are cheap, cages are expensive.”\(^1\)

By the time their egg production declines, the hens’ skeletons are so fragile that many suffer broken bones as they’re removed from the cages.\(^5,8\) Some flocks are gassed on-site,\(^7\) those sent to slaughter often endure long journeys and sustain further injuries.\(^5,8\)

Some hens suffer paralyzing fractures\(^5,8\) or get trapped in the wires.\(^1\) In the single cage above, two dead bodies are left with live birds. Each week, hundreds of thousands of hens die on U.S. egg farms.\(^5,8\) Most spend one to two years in battery cages.\(^5,7\)
In the September 1976 issue of the industry journal *Hog Farm Management*, John Byrnes advised: “Forget the pig is an animal. Treat him just like a machine in a factory.”

Today’s pig farmers have done just that. As Morley Safer related on 60 Minutes: “This [movie *Babe*] is the way Americans want to think of pigs. Real-life ‘Babes’ see no sun in their limited lives, with no hay to lie on, no mud to roll in. The sows live in tiny cages, so narrow they can’t even turn around. They live over metal grates, and their waste is pushed through slats beneath them and flushed into huge pits.”

Piglets in confinement operations are weaned from their mothers [2–3 weeks] after birth (compared with 13 weeks in nature) because they gain weight faster on their hormone- and antibiotic-fortified feed. This premature weaning leaves the pigs with a lifelong craving to suck and chew, a desire they gratify in confinement by biting the tail of the animal in front of them.... The USDA’s recommended solution to the problem is called ‘tail docking.’ Using a pair of pliers (and no anesthetic), most but not all of the tail is snipped off. Why the little stump? Because the whole point of the exercise is not to remove the object of tail-biting so much as to render it more sensitive. Now, a bite on the tail is so painful that even the most demoralized pig will mount a struggle to avoid it.”

*The New York Times Magazine*
“An Animal’s Place” by Michael Pollan, 11/10/02

Piglets are routinely castrated and tail docked; pain killers are rarely used. Above: Breeding sows and newborns are confined to stalls, while young pigs (left) are fattened for slaughter.

**Pigs**
In the September 1976 issue of the industry journal *Hog Farm Management*, John Byrnes advised: “Forget the pig is an animal. Treat him just like a machine in a factory.”

Today’s pig farmers have done just that. As Morley Safer related on 60 Minutes: “This [movie *Babe*] is the way Americans want to think of pigs. Real-life ‘Babes’ see no sun in their limited lives, with no hay to lie on, no mud to roll in. The sows live in tiny cages, so narrow they can’t even turn around. They live over metal grates, and their waste is pushed through slats beneath them and flushed into huge pits.”

Above: Most pigs are about six months old when trucked to slaughter. For more on factory farming, including its impacts on resources and the environment, see OpposeCruelty.org

“Do we, as humans, having an ability to reason and to communicate abstract ideas verbally and in writing, and to form ethical and moral judgments using the accumulated knowledge of the ages, have the right to take the lives of other sentient organisms, particularly when we are not forced to do so by hunger or dietary need, but rather do so for the somewhat frivolous reason that we like the taste of meat?”

Peter Cheeke, PhD

Contemporary Issues in Animal Agriculture, 2004 textbook

Left: Turkeys enter the slaughter area, shackled by their legs. Due to their wingspan, turkeys are prone to painful pre-stun shocks.

More than 95 percent of U.S. land animals killed for food are birds, yet there’s no federal law requiring they be handled humanely. The pain birds suffer from being hung in shackles can be extreme and inevitably causes violent wing flapping, which may result in dislocated joints and broken bones. Above are photos from a 2005 investigation that found the neck-cutting machines often missed, slicing open chickens’ thighs (center), faces, or other body parts.

If Slaughterhouses Had Glass Walls...

Federal law requires mammals be stunned prior to slaughter (exempting kosher and halal, which generally require animals be fully conscious as their necks are cut). Typically, electric current is used to induce a heart attack and/or seizure; or a captive bolt gun is used to deliver a blow to the skull or shoot a rod into the animal’s brain.

It’s not uncommon for an animal to suffer one or two failed stuns. In the case of a failed electrical stun, an animal may be paralyzed without losing sensibility. Unconscious animals whose necks are not cut soon enough may regain their senses after being hung on the bleed rail.

This photo by Dr. Temple Grandin shows a conveyor system commonly used to restrain cows and pigs during stunning.
In January of 2007, a Mercy For Animals investigator took a job at one of the nation’s largest poultry slaughterhouses to witness the conditions firsthand:

Birds with broken legs and wings, open wounds, and large tumors were shackled and hung on the slaughter line; some of the injured were left writhing on the floor for hours beforehand. Workers punched, kicked, threw, and mutilated live birds; they tore eggs from the birds’ bodies to toss at coworkers, and ripped the heads off birds who were trapped inside the transport cages.

A year later, PETA released footage of two other large plants where many conscious birds were mangled by the killing machines or had their heads yanked off by workers.

Recent Undercover Investigations into Poultry Slaughter

In January of 2007, a Mercy For Animals investigator took a job at one of the nation’s largest poultry slaughterhouses to witness the conditions firsthand:

Birds with broken legs and wings, open wounds, and large tumors were shackled and hung on the slaughter line; some of the injured were left writhing on the floor for hours beforehand. Workers punched, kicked, threw, and mutilated live birds; they tore eggs from the birds’ bodies to toss at coworkers, and ripped the heads off birds who were trapped inside the transport cages.

A year later, PETA released footage of two other large plants where many conscious birds were mangled by the killing machines or had their heads yanked off by workers.
“Day 52: I saw firsthand how clever and empathic pigs can be. A sow and her entire litter had escaped their crate and gathered in the hallway. I discovered the sow had loosened steel pegs in two different places. I told a coworker this story; she said when a sow figures out how to unlock her crate, she often goes around unlocking all of the others as well....

“Day 66: Using a ‘captive bolt pistol,’ a worker fired a rod into the sow’s head, but she didn’t die. She just stood looking stunned as blood trickled from her forehead. She then got her bearings and tried to turn and run. After a struggle, the worker got in another shot, which sent her down. She continued to spasm for 15 minutes. Afterward, our supervisor told me she was dubbing my coworker ‘Two-Shot’ as he rarely kills a sow with one bolt.”

from the diary of MFA investigator “Mike”

Piglets whose intestines fell out during castration were termed “ruptured” and dropped into the gas cart to be killed later, once enough had accumulated to economically justify expending the gas. Mike frequently found piglets still alive after the gassing process, eyes open and gasping for air. His supervisor told him death is supposed to occur within 5 minutes, but that it usually takes 10 or more.

“It’s incredibly cruel,” she told him, “but it’s how we’re told to do it.”

Breeding Misery
MercyForAnimals.org

During the spring of 2009, an MFA undercover investigator, “Mike,” worked at a pig breeding facility in Pennsylvania. His diary and secret film provide a rare glimpse into the world of industrial pork production.

Pregnant pigs were confined in two-foot-wide stalls, only able to take one step forward or back. Many had deep, infected sores and scrapes from constantly rubbing against the metal bars.

Workers clipped the piglets’ tails with dull pliers; performed castrations, ripping out the piglets’ testes with their hands; and tattooed sows by repeatedly driving a spiked mallet into the pigs’ flesh—all without anesthesia.

Piglets were grabbed by their ears or legs, tossed between the workers, thrown across the room, and slammed into transport carts.

Mike never observed any veterinary care. Injured, sick, and runt piglets were slowly suffocated in overcrowded CO₂ gas carts. Sows deemed unprofitable to maintain were put to death with a captive bolt gun.
During EBAA’s investigation, 39 sick and injured chickens were rescued, including Yosemite (top of page), Laci, and Scooter (below). 

“[C]ontrary to what one may hear from the industry, chickens are not mindless, simple automatons but are complex behaviorally, do quite well in learning, show a rich social organization, and have a diverse repertoire of calls. Anyone who has kept barnyard chickens also recognizes their significant differences in personality.”

Bernard E. Rollin, PhD
Farm Animal Welfare, Iowa State University Press, 2003
If the anticruelty laws that protect pets were applied to farmed animals, many of the nation’s most routine farming practices would be illegal in all 50 states. Are dogs and cats really so different from chickens, turkeys, pigs, and cows that one group deserves legal protection from cruelty, while the other deserves virtually no protection at all?

Disregard for farmed animals persists because few people realize the ways these individuals are mistreated, and even fewer actually witness the abuse. Once aware, most people are appalled—not necessarily because they believe in animal rights, but because they believe that animals feel pain and that morally decent human beings should try to prevent pain whenever possible.

“Historically, man has expanded the reach of his ethical calculations, as ignorance and want have receded, first beyond family and tribe, later beyond religion, race, and nation. To bring other species more fully into the range of these decisions may seem unthinkable to moderate opinion now. One day, decades or centuries hence, it may seem no more than ‘civilized’ behavior requires.”

*The Economist*
“What Humans Owe to Animals,” 8/19/95
Every single time you choose compassion, you’re making a difference!

Although all factory farming involves cruel practices, you can spare more animals from suffering by avoiding eggs and the meat of birds and pigs.

Exploring a meatless diet is simple—opposing cruelty can be as easy as substituting marinara for meat sauce, opting for bean burritos instead of chicken or beef tacos, and trying some of the many vegetarian products now available.

We no longer need to make a special trip to the health food store for veggie burgers or deli slices: today, nearly all supermarkets carry delicious, cruelty-free fare.

“[C]limate change is the most serious challenge facing the human race.

“The livestock sector is a major player, responsible for 18 percent of greenhouse gas emissions measured in CO₂ equivalent.”

**FAO of the United Nations**
*Livestock’s Long Shadow, 2006 (TinyURL.com/z5kad)*

Vegetarian diets not only prevent suffering, but also protect the planet! Gardein buffalo wings, BBQ pulled shreds, and chick’n filets (above) and Tofurky kielbasa (right) are just a few alternatives to eating chickens and pigs.
"When I met my first vegetarian, he told me he had not eaten meat for fourteen years.

"I looked at him as if he had managed to hold his breath that entire time.

"Today I know there is nothing rigorous or strange about eating a diet that excludes meat."

Erik Marcus

Vegetarian options have come a long way in just the past few years. Dozens of different kinds of high-protein meat substitutes are now on the market, including chicken-, turkey-, ham-, and bologna-style lunchmeats for quick sandwiches, as well as a wide variety of veggie burgers and hot dogs.

Explore new foods and experiment with different flavors and brands to find your personal favorites. You might dislike one veggie burger, but think another is great!

Veggie burgers vary in texture as well as in taste. Shown here is “the ultimate beefless burger” by Gardein.

Simple Meal Ideas

**Breakfast**  Fruit smoothie ● Oatmeal
Cold cereal or granola with nondairy milk
Pancakes ● Bagel with tofu cream cheese
Toast with jelly ● Fruit-filled toaster pastry
Tofu scramble with veggie sausage

**Lunch & Dinner**  Vegetarian lunchmeat sandwich ● Grain or soy burger ● Veggie hot dog ● Veggie pizza ● Bean burrito
Peanut butter and jelly ● Pasta and tomato sauce ● Tofu lasagna ● Baked tempeh or tofu sandwich ● Soup or chili (over pasta or rice) ● Baked, mashed, or fried potatoes
Tofu, tempeh, or seitan stir-fry

**Snacks & Dessert**  Nondairy ice cream, yogurt, or pudding ● Vegan cookies, pie, or cake ● Fresh or dried fruit
Nuts or seeds ● Trail mix
Pretzels or popcorn
Chips and salsa
Clif Bar
There are also soy-, rice-, and almond-based milks and ice creams for those who are interested in replacing dairy.

Cruelty-free selections are usually offered at Chinese, Indian, Italian, Mexican, Middle Eastern, Thai, and other ethnic restaurants, as well as at many chains, such as Chevys, Denny's, Little Caesars, Papa John's, Subway, Johnny Rockets, and Taco Bell.

Our Guide to Cruelty-Free Eating contains a vegan foods glossary, simple meal-planning tips, and easy recipes for breakfast, lunch, dinner, and dessert. Please see page 15 to order your free copy today!

Beans are a good source of protein and relatively inexpensive. Above is a chili with beans as well as “textured vegetable protein,” which is also less expensive than ready-made faux meats. You’ll find the recipe for this chili and other bean-based dishes in our online starter guide, and an array of heat-and-serve options at most supermarkets.

**Staying Healthy**

A well-planned vegetarian diet is good for your health! According to the American Dietetic Association, vegetarians tend to have lower body weights, cholesterol levels, and blood pressure, as well as lower rates of type 2 diabetes and heart disease.²⁰

With a bit of planning, anyone can maintain a healthy vegetarian diet. If you decide to eat little or no meat, eggs, or dairy, it’s important to make sure that you’re getting vitamin B12 and that you read “Staying Healthy on Plant-Based Diets”—an article available at VeganHealth.org and in our free Guide to Cruelty-Free Eating.

After reviewing this booklet, we hope you’ll do what you can to oppose the cruelties of animal agriculture. Each time you choose to eat less meat and eggs, you’ll remove your support from a cruel system and help create a more compassionate world.

If you decide to eliminate animal-derived foods from your diet, please remember: the objective is to reduce suffering, not to achieve personal purity or perfection.

Years of eating less meat and eggs will prevent more suffering than a brief stint on a vegan diet, so it’s more important to take an approach you can sustain. If you make exceptions, such as eating meat on certain occasions, you’ll still make a big difference by eating vegetarian the rest of the time.

You’ll find lots more information on our web site, including our complete list of helpful resources. We also offer a free weekly electronic publication of news and tips. And, elsewhere on the Internet, many email lists and social groups are available for people exploring compassionate eating.
“There’s a schizoid quality to our relationship with animals, in which sentiment and brutality exist side by side. Half the dogs in America will receive Christmas presents this year, yet few of us pause to consider the miserable life of the pig—an animal easily as intelligent as a dog—that becomes the Christmas ham.”

_The New York Times Magazine_  
“An Animal’s Place” by Michael Pollan, 11/10/02

“I think everybody has that capacity to stop and think and say, ‘If I knew you, I wouldn’t eat you.’

“And in some ways, it really is that simple.”

Tom Regan, PhD  
NCSU Professor of Philosophy, from _A Cow at My Table_
